

# DIGITAL TOOLS: AI SCRIBE

AI Scribes, also known as digital or ambient scribes, utilize speech-to-text technology and artificial intelligence (AI) to convert clinician-patient conversations into detailed administrative notes within the EMR. By integrating advanced tools into clinical workflows, AI Scribes reduce administrative burdens and allow clinicians to focus more on patient care, enhancing overall care delivery.

## WHY USE AI SCRIBES?

*\*AI Scribe is best suited to support primary care settings with diverse clinical encounters.*

- **Boost Clinician Productivity and Efficiency:** Significantly cut down on the time clinicians spend on manual charting and documentation.
- **Speedy Note Finalization:** AI-generated notes are often ready within minutes after a consultation, allowing easy review and edits by primary care providers.
- **Enhanced Note Quality:** Accurately captures details from conversations, tailoring notes to match the clinician's style and specialty.
- **Lower Documentation Costs:** Decreases reliance on human scribes.
- **Improved Patient Experience:** Facilitates more interactive and engaged provider-patient interactions.

## PRIVACY, SECURITY, AND CONSENT:

Before using AI Scribe, ensure all privacy and security measures are in place and always obtain patient consent. Here is a sample script that can be used:

*"I'm using a tool to capture notes during our visit to reduce the need for me to type notes while we speak to each other. The tool is like an assistant and it uses AI (artificial intelligence). You don't have to agree to the use of the tool during your visit, and we will only proceed if you are comfortable with it. Are you ok if I use this technology that will document a transcript of our conversation into your chart? Like any of your personal information, this is only something that I or others in your circle of care will see and the AI-generated note will be reviewed by me before I accept it as final."*

## COST OF AI SCRIBES

- **Tali AI:** Dictation only - \$50/user/month, Ambient Scribe - \$150/user/month
- **Mutuo Health (Autoscribe):**
  - Tier 1 - \$155/user/month: French and English support, SOAP note template, instant note generation, 30-day storage, unlimited tech assistance, end-to-end encryption.
